Replacement Hinge

*864 Full Overlay Hinge

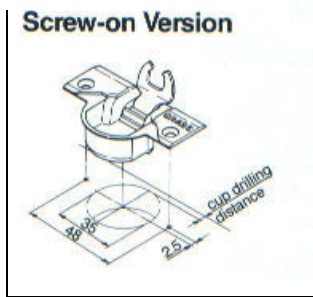

Note: The 864 hinge will fit in the same cup hole, but the screw hole pattern in the door is different. The cup will not cover the 830 mounting screw hole pattern, but will function the same. If the new hinges have plastic dowels, remove if necessary. Fill the holes that are exposed with wood putty. Pre-drill new holes with a 3/32" bit. Be sure not to drill deeper than 7/16" so that it will not go through the front of the door. When door is removed, replace all hinges on that door with new hinges of the same type. The screw holes on the baseplate will fit the existing screw holes on the frame.

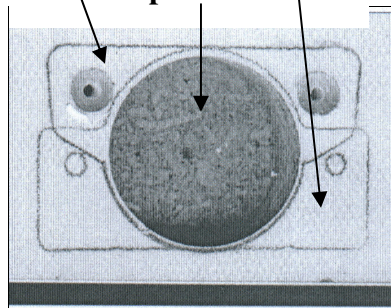

Make sure the cups are straight when pre-drilling cup mounting screw holes.
